

MONTHLY SALES REPORT — PROMPT PLAYBOOK

Copy and paste the prompts in order to recreate the September report workflow for October 2026.

Reusable rule: for later periods, replace every instance of “October 2026” with the target month and year.

Step	Copy/Paste Prompt	Expected Result
1 — Generate data	Act as a data specialist. Generate a realistic monthly sales dataset for a modern retail company for October 2026. The dataset must contain exactly 5 base columns: Date, Product Category (include Electronics, Home Decor, Apparel, and Fitness), Region (North, South, East, West), Units Sold, and Unit Price (in USD). Provide exactly 20 diverse rows spread across the month. Insert it on the current sheet as a structured Excel table named SalesOct2026, with dates, whole-number units, and USD price formatting.	A 20-row structured table with all four categories and regions.
2 — Check data quality	Check the entire SalesOct2026 table for fully blank rows and exact duplicate entries across all columns. Highlight blank rows in light yellow and duplicate rows in light red if any exist. Report the number and worksheet row positions of each issue.	Blank and duplicate records identified and highlighted.
3 — Add calculations	Add a new table column named Total Revenue that calculates Units Sold multiplied by Unit Price (USD). Next, add a column named Performance Tier that displays High if Units Sold is greater than 30 and Standard if it is 30 or less. Use live structured-reference formulas for every row and format Total Revenue as USD.	Two live calculated columns added across all rows.
4 — Apply conditional formatting	Apply conditional formatting to the Performance Tier data cells. Automatically highlight every cell containing High with a light green fill and dark green text. Ensure the rule updates automatically when the tier changes.	All High-tier cells visually emphasized.
5 — Build PivotTables	Analyze all rows and create two live PivotTables on the current sheet, to the right of the main table: (1) Sum of Total Revenue by Product Category and (2) Sum of Units Sold by Region. Keep grand totals, use a professional blue PivotTable style, format revenue as USD, and identify the highest-revenue category and lowest-units region.	Two same-sheet PivotTables with reconciled totals and key findings.

6 — Create chart	Create a clustered column chart showing total Units Sold by Product Category for all of October 2026. Place it on the current sheet below the PivotTables. Use the title “Units Sold by Product Category — October 2026”, show whole-number data labels, use a zero baseline, hide the legend, and link it to live aggregated data so it updates with the source table.	A live clustered column comparison chart.
7 — Add executive summary	Based on the full SalesOct2026 table, write a three-bullet Executive Summary for senior leadership. Highlight total revenue, the top-performing product category by Total Revenue, and the most profitable region by Total Revenue. Include dollar values and percentage shares, and format it as a professional text block below the main table without overlapping the chart.	A leadership-ready three-bullet summary.
MASTER PROMPT	Create the complete October 2026 monthly retail sales report end-to-end on the current worksheet. Generate exactly 20 realistic rows with the base columns Date, Product Category, Region, Units Sold, and Unit Price (USD), covering Electronics, Home Decor, Apparel, Fitness and North, South, East, West. Format the data as a table named SalesOct2026. Check and highlight blank or duplicate rows. Add live Total Revenue and Performance Tier columns, where Total Revenue equals Units Sold times Unit Price and Performance Tier is High above 30 units, otherwise Standard. Highlight High tiers light green. Add same-sheet PivotTables for Total Revenue by Product Category and Units Sold by Region, then identify the highest-revenue category and lowest-units region. Below the PivotTables, create a clustered column chart of Units Sold by Product Category with whole-number labels. Finally, add a professional three-bullet executive summary showing total revenue, the top category, and the most profitable region by revenue. Keep all formulas, PivotTables, conditional formatting, and charts live and verify all 20 rows with no formula	Complete report produced in one request.
